

Contributions:

Kavin Sitsabeshon (25%)

- Coded the article view screen
 - Contains a view of an article image with a headline and subtitle filled in
- Coded majority of navigation across screens
 - Utilized navigation links in navigation stacks to track views across navigation
- Coded header view
 - Contains a progress view showing the day of the week

Andy Hsu (25%)

- Coded the login screen
 - Contains text fields for username and password, the 'Apollo' title, and buttons for login, create account, and sign in with Google
- Coded the create account screen
 - Contains text fields for name, password, email, birthday, location, and occupation
 - Created a dropdown menu within the occupation text field that lists a bunch of occupations when the text field is pressed

Nandini Bhardwaj (25%)

- Coded the settings screen
 - Contains toggles for dark/night mode and sound effects
 - Contains buttons and navigation links for tasks associated with account and app preferences (delete account, update profile picture, etc.)
- Integrated night mode functionality with each screen once the toggle is set in Settings screen
 - When the night mode toggle is turned on, each screen inverts into night mode colors.

Srihari Manoj (25%)

- Coded the interest selection page
 - Contains two labels, a continue button to the next screen, and many radio buttons for possible news preferences
 - The radio buttons are filled with a checkmark when clicked
 - Used a set to keep track of selected options from user
- Added quote and background color to loading screen
- Helped with coding navigation across screens

Deviations:

- We didn't list a create account page in the proposal but we will need one so that new users can login, so we included it in this release.
- The navigation links and buttons on the setting page are currently dummies (other than the night mode toggle) and will be given segues/functionality in the following release.

- We have settings referring to profile picture and notifications although we have not yet integrated these into the create account screen. We expect to add these features once the user creates their account in the form of a new screen asking for profile picture and an alert asking for notification consent in the following release.
